Foundations Internal Ratings Based Approach (FIRBA) applied to corporate and credit institution exposures.

- In October 2015, OP received permission from the ECB to treat insurance holdings within the conglomerate as RWA (RW approx. 280%) according to the previous practice. However, the ECB has the option of cancelling the permission as part of the harmonisation of supervisory options. OP's CET1 ratio would decrease by no more than 0.6 pps if the permission was cancelled and OP transferred to the deduction treatment of insurance holdings.
- Since the beginning of 2015, the capital conservation buffer requirement has been 2.5% of RWA. In July 2015, Fin-FSA set the requirement for the O-SII buffer for OP at 2%, effective since 7 Jan. 2016. In December 2015, Fin-FSA decided not for the time being to impose a countercyclical capital buffer requirement on banks, but began preparations for setting higher risk weights on housing loans in an effort, according to the Authority, to prepare for an increased systemic risk.
- The ECB has imposed on OP a discretionary capital requirement buffer as part of the supervisory review and evaluation process (SREP). When taking account of the requirement for CET1 capital, the discretionary capital requirement buffer is 9.75%

*) Doubtful receivables refer to receivables that are more than 90 days overdue, other receivables classified as risky and forbore receivables. Definitions of non-performing and renegotiated receivables correspond with the EBA's guidelines on forbore and non-performing receivables since Financial Statements of 2014 and the comparative information has been restated accordingly ever since. According to the new definition, for example, the probation period of forbore receivables was extended considerably, increasing the level of doubtful receivables compared to the previous definition. Additionally, comparative figures related to doubtful receivables have been restated as a result of the adoption of IFRS 10 Consolidated Financial Statements.
