OP-Real Asset Companies Fund, A-share class (ISIN: FI0008807573)

This fund is managed by OP Fund Management Company Ltd, which is part of the OP Group.

Objectives and Investment Policy

OP-Real Asset Companies Fund is an equity fund which invests its assets mainly in Western European equity markets, in the stocks of companies that invest in real estate, infrastructure and forest, or whose business otherwise involves these sectors. The fund mainly focuses its investments on rental apartments, commercial properties and logistics real estate.

The Fund mainly invests directly in equities. The Fund may use derivative instruments in order to hedge against adverse market movements, to replace direct investments and to otherwise promote effective portfolio management.

The Fund's equity market exposure may vary between 75% and 100% of the Fund's value. The equity weighting typically varies between 90% and 100%.

The Fund diversifies its equity investments across various companies. The Fund typically invests in equities of about 30–50 companies but this number may vary depending on the portfolio

manager's view.

The investments underlying this fund do not take into account the EU criteria for environmentally sustainable economic activities. However, this fund integrates sustainability risks using the methods specified in the fund prospectus.

The Fund uses an absolute Value at Risk (VaR) analysis to monitor total risk. The Fund's VaR may not exceed 20 percent of the Fund's value. More information on VaR calculation can be found in OP Fund Management Company's fund prospectus.

Any income received from the investments of the fund is reinvested in the fund.

Recommendation: This fund may not be appropriate for investors who plan to withdraw their money within 7 years.

Shares in the mutual fund can be purchased, sold or changed Each Banking Day. If the execution order is received by 16:00:00, the order is executed to the value of the order date.

Risk and Reward Profile

The synthetic risk and reward indicator (SRRRI) describes the risk of NAV fluctuation of units in the fund based on the actual fluctuation over the five preceding years. The indicator places the fund in category 6, which means that there is a high risk of NAV fluctuation associated with the fund unit. It should be noted that even the lowest risk category of 1 does not mean a risk-free investment. Historical data, such as those used in the calculation of the synthetic risk-reward indicator, do not necessarily give a

reliable view of the future, and therefore the risk category of the fund may also change.

Equity market risk, style risk and currency risk form the key risks associated with the NAV performance of the Fund.

Equity market risk may cause changes to the Fund's value because of general stock market developments or changes related to an individual company.

The Fund invests in companies of a certain style or size and thereby the value performance of investments may deviate considerably from the general equity market development.

The Fund may invest in non-euro-area markets involving currency risks. The investments' value in euros increases when a currency appreciates and, correspondingly, decreases when a currency depreciates.
